

Lean Six Sigma Awareness Program

5th December 2007 - AMI Seminar Room

Overview

Lean Six Sigma is a business philosophy. Basically, it is an integration of two most valuable business philosophies known as Lean Thinking and Six Sigma. Lean focuses on speed and Six Sigma focuses on quality. By combining the two, the result are high quality products and fast delivery services.

Lean Six Sigma provides a near perfect solution for operational improvement and it can serves heterogeneous needs of various industries. Ultimate aim of the strategy is to “Delight the Customer with The Value Added Products and Services”. Business processes are consisting of value and non-value from customer perspective. Typically, 1% ~ 10% of the processes is value activities. Lean Six Sigma helps to increase the value in the processes through waste elimination and variation reduction thus improve cost and quality. These will definitely satisfy the shareholders (higher profit) and customers (higher product value).

Believe it or not, all these benefits are achievable through Lean Six Sigma methodology without any substantial capital investments. Perhaps, the only investment is the employees' time to spend on the improvement activities.

Goals and objectives
